

Check Station Requirements for Hunters Harvesting Deer on Fort Eisenhower

- All deer harvested must be checked in before the hunter leaves the installation with the deer.
- Harvested deer should be brought to the nearest check station for weigh in and jawbone removal (currently there are check stations at 111th Ave, Training Area 48, and Training Area 49).
- Hunters should provide the requested information pertaining to each harvested deer on the electronic harvest information form during the iSportsman check out process. If the hunter is unable to access this electronic harvest information form they should complete a FG Form 9168 (kill card) available at each check station and submit it there.
- Deer harvested during normal duty hours (M-F, 0800-1600 hrs, excluding federal holidays) are no longer required to be checked by a Fort Eisenhower biologist, however, Fort Eisenhower biologists would still like to measure any buck with 4 points or greater on one side at the hunter's convenience by calling (706)-832-7661, (706)-726-0098, or (706)-791-9932.
- If the harvested deer is antlerless, the hunter must pull one lower jawbone from the deer and submit it according to the instructions below.
- If the harvested deer is antlered the hunter has the option of submitting the jawbone at that time or submitting it within 7 days if they wish to have the jawbone removed by a taxidermist.

Instructions for Submitting Jawbones

- Pull one lower jawbone according to instruction posters at the check station and on the iSportsman site.
- Fill out one of the wire tags with the following information:
 - Hunter's full name
 - Date of Harvest
 - Sex of Deer
 - Weight of Deer (indicate whether dressed or live weight)
 - Training Area of Harvest
- Attach the tag firmly to jawbone using the wires.
- Place the tagged jawbone inside the wire collection bin.

****Failure to submit a jawbone in the required time frame may result in an permit or iSportsman account suspension**
